

CEFIONTECT

For cleaner, longer lasting ceramics.

Benefits

- Easier to clean
 - Requires fewer cleaners
 - Suitable for microfiber cloth
 - Especially durable and long-lasting
-

Standard on all TOTO ceramics

All TOTO Europe sanitary ceramics, from washbasins to toilets, feature the extremely durable and Hygienic CeFiONtect glaze exclusively available only on TOTO products.

Fired glaze

One unique aspect of this special glaze is that it is applied prior to firing the ceramics and goes through the entire firing process. Unlike coated ceramics in which the glaze is applied after firing, the firing process makes the CeFiONtect glaze especially durable and long-lasting.

Simply smoother

The CeFiONtect glaze has a remarkably smooth surface. If you look at conventional ceramic surfaces under a microscope, you see a jagged landscape reminiscent of a mountain range. It is easy for dirt to accumulate in these "valleys". This is not possible with the extremely smooth CeFiONtect glaze, which makes it difficult for dirt to stick in the first place.

Suitable for microfiber cloth

Microfiber cloth is not suitable for cleaning conventional ceramics. The microfibers erode the peaks of the "mountain ranges" over time, giving the ceramic a dull, lacklustre surface. CeFiONtect is extremely smooth and hard, making microfiber cloths an appropriate option for cleaning.

Cleaning and care

The CeFiONtect glaze makes ceramics far easier to clean. There are practically no special cleaning instructions for this very hard, durable and smooth surface, which can stand up to pressure washers, disinfectants and aggressive non abrasive cleansers.

In most cases, the ceramic surface should be cleaned regularly with a clean, moist cloth. If it is necessary to use a cleanser, we recommend a slightly acidic cleanser with vinegar or citric acid to prevent lime scale, or an alkaline cleanser to eliminate oils and fats. TOTO always recommends using cleansers without abrasives. Please avoid using aggressive cleansers to help the environment.

You can use any conventional toilet bowl cleaner and a toilet brush for your toilet.

Ecology

The properties of the CeFiONtect glaze make it very easy to clean without the need for aggressive cleansers. This is better for the environment.
